

SLIM Companion™ Email Manager increases user productivity and provides unique functionality to simplify your work. Upload emails using drag and drop, preview emails, attach SharePoint documents to emails and more...

Upload emails to SharePoint by dragging them from your email client via the desktop to your browser. SLIM Companion Email Manager automatically extracts email metadata like To, From, Subject, ... and fills the corresponding SharePoint columns. This allows for effective filtering of emails using views and powerful searches.

SLIM Companion Email Manager provides an efficient way to view emails in your browser without opening your mail client. The preview shows the email's content plus images. Attachments are shown as links and can be directly opened. You can also attach a SharePoint document to an email with a single click.

SLIM Companion Email Manager can also be used to upload multiple files or complete folder structures¹ from the user's computer, file shares, USB drives, Google Drive, DropBox, Box and SharePoint 2007/2010/2013/Office 365 using drag and drop¹. Parallel processes are used to deliver exceptional performance. The add-in automatically caters for long item names, 0 kB files, illegal characters and blocked files. The tool supports file sizes up to 15 GB and data sets of 10's of GB's. Folder structures can be downloaded into a single zip file.

The tool supports SharePoint Online, SharePoint 2013 and 2016. The tool is compatible with the latest versions of Chrome, FireFox and Opera plus Internet Explorer 11 and Microsoft Edge.

¹) Drag and drop of folders is only supported on Chrome, Edge and Opera.

SLIM Companion Email Manager features

Intuitive user interface

Extends the standard SharePoint ribbon and ellipsis menu.

Functionality

Extract email metadata from emails. Preview emails in the browser. Attach SharePoint documents to an email. Migrate files or complete folder structures using drag and drop¹. Support for custom metadata. Download complete folder structures.

Performance

Exceptional performance by using parallel processes and caching techniques.

Deployment

Installs as a SharePoint add-in. Supports multiple browsers and compatible with SharePoint 2013 / 2016 and SharePoint Online.

Trial
