

Access SharePoint as a File Explorer tree in a browser without installing any software. It is easy-to-use, easy to deploy, cost-effective and fast.

Upload complete folder structures from your computer, file shares, USB drives, OneDrive, Google Drive, Dropbox, Box and SharePoint 2007 / 2010 / 2013 / 2016 / Office 365 by using drag and drop.

SLIM Companion Explorer supports Document libraries, Picture libraries and Asset libraries. It can handle file sizes up to 15 GB and allows migration of large data sets (e.g. 10's of GB's). Custom metadata (and Content Types) are supported and the tool provides detailed logging. Properties in a wide set of file formats (msg, eml, pdf, Office files, jpg, gif, png, tiff, svg, wmv, wma, ...) are automatically extracted and captured into SharePoint columns. The tool also caters for long item names, illegal characters, blocked files and can be used to keep the original modification dates. Select content by filtering on modification date, size, extension or document name.

Increase productivity and improve adoption

Popular file formats can be previewed in the browser (e.g. msg, pdf, docx, tiff, ...). Browse the contents of zip files and open individual files without downloading the entire file. Delete items and move files just as with File Explorer. Download very large folder structures (10's of GB's). Generate reports on the contents present in the source (e.g. file share) or in SharePoint. Delete document versions in a controlled way (e.g. keep the last 2 major versions).

Parallel processes are used to deliver exceptional performance. The tool has been designed to operate under constrained network conditions. Service degradation can be avoided by trimming the number of parallel processes and imposing thresholds. Support for libraries exceeding the 5000-item list view threshold (LVT).

Deployment is as simple as uploading a few small files to SharePoint and does not require any software installation on SharePoint or the user's computer.

¹ Uploading folders is not supported with Internet Explorer 11

SLIM Companion Explorer features

Intuitive user interface

Mimics File Explorer in a browser.

Functionality

Migrate complete folder structures¹ using drag and drop. Support for custom metadata and content types. Extract properties from different file formats (msg, eml, pdf, docx, pptx, xlsx, jpg, tiff, png, wma, wmv, ...). Advanced filtering capabilities. Download very large folder structures. Content reporting capabilities.

Performance

Exceptional performance by using parallel processes and caching techniques.

Deployment

No software installation on SharePoint or the user's computer.

Supported Systems

SharePoint Online (Office 365), OneDrive for Business, Microsoft Teams, SharePoint 2013 and SharePoint 2016. Supported browsers: Chrome, Edge, Firefox, Opera, Safari and Internet Explorer 11.

Licensing

Licensed per site collection for small / medium sized companies. Licensed per user for Enterprises.
