

Access SharePoint as a File Explorer tree in a browser without installing any software. It is easy-to-use, easy to deploy, cost-effective and fast.

Upload complete folder structures from your computer, file shares, USB drives, OneDrive, Google Drive, Dropbox, Box and SharePoint 2007 / 2010 / 2013 / 2016 / 2019 and Office 365 by using drag and drop.

SLIM Companion Explorer supports Document libraries, Picture libraries and Asset libraries. It can handle file sizes up to 15 GB and allows migration of large data sets (e.g. 10's of GB's). Custom metadata (and Content Types) are supported and the tool provides detailed logging. Properties in a wide set of file formats (msg, eml, pdf, Office files, jpg, gif, png, tiff, svg, wma, mp3, wmv, mov, mp4, ...) are automatically extracted and captured into SharePoint columns. Capture GPS coordinates in SharePoint Location column. The tool caters for long item names, illegal characters, blocked files and can be used to keep the original modification dates. Directly upload emails (and/or attachments) from Outlook to SharePoint using drag and drop for Edge and Chrome, use unique names, extract email metadata and set custom metadata (e.g. customer ID). Identify and report on encrypted files during upload.

Preview popular file formats in your browser (e.g. msg, pdf, docx, tiff, ...). Browse zip files online and delete or move items just as with File Explorer. Download very large folder structures (10's of GB's) plus document metadata. Generate reports on the contents present in the source (e.g. file share) or in SharePoint. Delete document versions or list encrypted documents.

Parallel processes are used to deliver exceptional performance. Service degradation can be avoided by trimming the number of parallel processes and imposing thresholds. Support for libraries exceeding the 5000-item list view threshold (LVT). Deployment is as simple as uploading a few small files to SharePoint and does not require any software installation on SharePoint or the user's computer. The optional App adds a button to the ribbon of all libraries in a site.

¹ Uploading folders is not supported with Internet Explorer 11

SLIM Companion Explorer features

Intuitive user interface

Mimics File Explorer in a browser.

Functionality

Migrate folder structuresⁱ using drag and drop. Support for custom metadata and content types. Extract properties from different file formats (msg, eml, pdf, docx, pptx, xlsx, jpg, tiff, png, wma, wmv, mp3, mov, mp4, ...). Download very large folder structures (plus document metadata). Content reporting capabilities.

Performance

Exceptional performance by using parallel processes and caching.

Deployment

No software installation on SharePoint or the user's computer. Optional App to add button to the SharePoint ribbon.

Supported Systems

SharePoint Online, OneDrive for Business, Microsoft Teams, SharePoint 2013, SharePoint 2016 and SharePoint 2019. Supported browsers: Chrome, Edge, Firefox, Opera, Safari and Internet Explorer 11.

Licensing

Licensed per user.
