

SLIM Companion™ Email Manager is a SharePoint Framework (SPFx) App that extends the standard SharePoint functionality for emails. It offers fast previewing of emails and email attachments (Office, pdf, jpg, ...) in your browser and allows quick navigation between multiple emails. The App can automatically extract email metadata (To, From, Subject, ...) during uploading and capture values into SharePoint columns. Online documents can be attached to a new email with a single click.

Email Manager extends the standard SharePoint ribbon and ellipsis menu (:).

View one or more emails in your browser.

View email attachments (e.g., pdf files) directly in your browser.

SLIM Companion Email Manager features

Intuitive user interface

Enriches the SharePoint modern view by extending the ribbon and ellipsis menu (:). Suitable for use in SharePoint and Microsoft Teams.

Functionality

Preview emails and attachments directly in modern browsers or Teams, navigate between multiple emails, and tag emails. Extract email metadata (To, From, Subject, ...) during uploading. Attach online documents in SharePoint (or Teams) to a new email.

Technical

Typical elapse time for viewing an email is 1 s. Supports views and sort order / filters set on the originating SharePoint page. Caters for large lists exceeding the list view threshold.

Deployment

Install the SPFx application as a SharePoint App. Support for tenant wide deployment or selective deployment to specific sites. Simple integration into Microsoft Teams.

Trial

Contact us for a trial license or request access to our demo environment.

View emails with email attachments.

Directly view attachments in an email with email attachments.

View Office email attachments in the browser.

This unique functionality requires no additional servers or remote services.

Use with Microsoft Teams

The Email Manager functionality can also be used in Teams. Open the “Files” tab and then select “Open in SharePoint” or add a new tab to open SharePoint. Drag and drop emails from Outlook, extract email metadata during uploading, attach online documents to new emails, quick viewing of emails, view email attachments (Office, pdf, ...) without downloading the emails.

Licensing

Price per user or site license for large organizations.

Business value.

The ability to view email attachments directly in the browser has a positive effect on the adoption of SharePoint Online and increases user productivity. Moreover, it eliminates the need to have Office apps installed on the end users' computer (e.g., macOS) and reduces exposure of sensitive content via the local computer (security and compliance).

The App also provides niche functionalities to simplify handling emails in SharePoint / Teams. For example, it is possible to attach a SharePoint or Teams document to a new email with a single click. When viewing multiple emails, it is possible to tag emails of interest for further processing. Email Manager dynamically replicates the settings of the current view and imposes the sort order or filters from the original SharePoint page.

The tool supports SharePoint Online and Microsoft Teams and is compatible with the latest versions of Chrome, Edge, Opera, FireFox and Safari on Windows 10/11, macOS and iPadOS.
