

Membership is a browser-based solution to list all sites a user has access to.

Hovering over a site exposes the link and allows the user to navigate to that site. Sites where the user does not have access are not listed. The tool consists of 2 small files that need to be uploaded to a location in SharePoint (e.g., SiteAssets library).

Membership offers several advanced features.

#### *Search and/or REST API*

The tool can use search and/or REST API to generate a consolidated list. The results are combined to provide a complete list.

#### *Filter permissions level*

The Membership tool can be configured to automatically check the permissions of the sites to ensure a fully up to date list is shown.

#### *Excluded sites / paths*

The tool can be configured to exclude sites (e.g., App Catalog Site) or paths such as /portals.

#### *Support for AAM*

Alternate Access Mappings can be automatically replaced by the primary SharePoint URL (optional).

#### *Performance*

Parallel requests and batch requests are used to deliver a performant solution that allows users to navigate to their sites of interest.

## Key features

### Functionality

List all sites a user has access to.

### Performance

Exceptional performance by using parallel processes.

### Deployment

No software installation on the SharePoint server or the user's computer.

### Supported Systems

SharePoint Online, SharePoint 2016 / 2019.

Browsers: Edge, Chrome, Firefox, Opera and Safari.

### Licensing

Licensed per SharePoint tenant.
